Human Papillomavirus (HPV): Misconceptions, Facts, and Prevention

Cancer—a heavy, scary, daunting diagnosis. Millions of Americans are affected by cancer every year, either themselves or someone they know. Technology is advancing at the speed of light, and for years now we have had access to a vaccine that prevents Human Papillomavirus (HPV), indirectly preventing many types of cancer, especially cervical cancer. It might sound strange to call the HPV vaccine an anti-cancer shot. However, when it prevents over 90% of HPV related cancers, it's hard to explain it any other way. National Women's Health Week (May 12th-18th) is a pivotal time to spotlight the significance of the HPV vaccine in safeguarding women's health. By emphasizing the HPV vaccine in our newsletter during this month, we underscore the critical role it plays in preventing cervical cancer and promoting overall well-being among women. That being said, providers can....
